

# Fidelis Email Security for Office 365

Ensure email security and compliance in the cloud.

## Detect and Stop Data Loss

Microsoft Office 365 provides employees with the freedom to work from anywhere with easy access to email from any device — on the road, at home, or in the office. But does this come at the expense of security? This is a natural and serious consideration. Historically, IT administrators lose behaviour and control when mail moves to the cloud. This makes detecting malicious behaviour and data exfiltration challenging. So how do you take full advantage of having your email in the cloud without sacrificing your security?

Analyse Microsoft Office 365 Mail traffic to identify inbound and outbound threats so you can quickly investigate and prevent data theft.

## Product Overview

Fidelis Email Security for Office 365 protects your organisation against data theft. We build on Microsoft's native security capabilities to fill email security gaps and ensure the safety of your data.

How do we do this? The Fidelis Mail sensor is deployed to examine Office Mail traffic to and from a Microsoft Exchange Server®. We scan each email message in its entirety and apply our proprietary Fidelis threat intelligence to identify any inbound and outbound threats — such as malware, malicious attachments and command and control activity. Once a threat is discovered, we can quarantine or prevent mail delivery. In addition, we find and stop unauthorised transfer of personally identifiable information (PII) and confidential data using email.

**Mitigate Risk:** Monitor and enforce policy for email traffic to establish a secure and compliant Office 365 Email environment.

**Stop Data Theft:** Quickly identify threats, detect emails with sensitive data and halt data loss before it begins.

**Detect Threats:** Stay one step ahead of advanced attackers and insider threats by analysing all inbound and outbound email traffic.

**Maintain Visibility:** Don't lose sight of your email traffic just because you have migrated to the cloud. Maintain 100% visibility into all Mail conversations.

## Highlights

### Identify and Stop Malicious Attachments:

Identify any inbound or outbound threats contained in email.

**Prevent Data Theft:** Quarantine or prevent mail delivery to halt the exfiltration of sensitive information.

### Historical Analysis of Email Metadata:

Go back in time to identify what happened in the past with rapid access to mail metadata.

**100% Visibility:** Fidelis offers full visibility into Office 365 Mail traffic by participating in the Mail (SMTP) conversation as a Message Transfer Agent (MTA).

**Turnkey Policies:** Fidelis Email Security for Office 365 comes with out-of-the-box policies that provide a wide range of real-time alerts, prevention and quarantine options, advanced threat detection and security forensics capabilities.

**Fast Deployment:** Typical deployments of the virtual sensor take 10–20 minutes to be fully operational.

**One Cloud Environment:** Fidelis Email Security for Office 365 uses the Microsoft® Azure™ cloud to provide seamless interaction and no need for a physical appliance.

# Protect your sensitive data with Email Security for Office 365.

## Capabilities

**Prevent Data Theft:** Quarantine or prevent mail delivery to stop the theft of or the intentional/unintentional release of sensitive information.

**Detect and Investigate Retrospectively:** Investigate what attackers have done in the past. By collecting and storing rich content-level metadata from email (such as filenames, users, etc.), Fidelis gives you the ability to go back in time and perform retrospective analysis using current threat intelligence and newly acquired indicators of compromise.

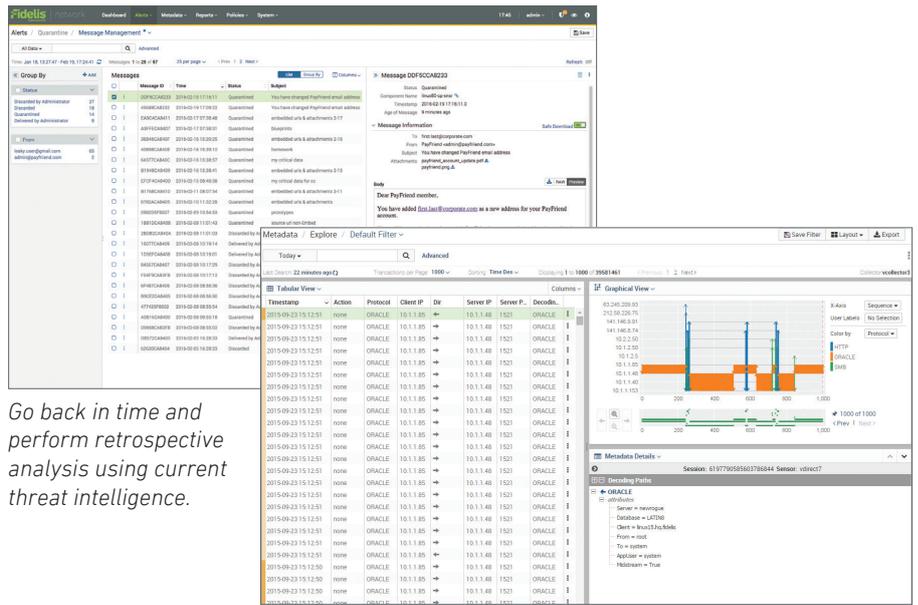

**Continuous Monitoring for Email-based Threats:** Fidelis Mail sensors track all URLs found in emails and apply additional scrutiny to any subsequent related session activity.

**Turnkey Policies:** Fidelis Email Security for Office 365 comes with out-of-the-box policies that provide a wide range of real-time alerts, prevention and quarantine options as well as advanced threat detection and security forensics capabilities.

**Stop Attackers:** Identify an attacker or insider threat that is active on your network and unilaterally block unauthorised transfers of information in real time.

**Correlate Seemingly Unrelated Activity:** Fidelis enables detection in the cloud and then links that activity with related on-premise activity to uncover malicious behaviour.

Microsoft, Azure, Microsoft Exchange Server and Office 365 are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.

Go back in time and perform retrospective analysis using current threat intelligence.

“By 2018, 40% of Office 365 deployments will rely on third-party tools to fill gaps in security and compliance.”

– Gartner, *How to Enhance the Security of Office 365*, November 17, 2015

“One in five organisations has experienced data loss, malware infiltration or related problems through mobile devices during the past 24 months.”

– *The Role of Third-Party Tools for Office 365 Compliance*, An Osterman Research White Paper, June 2015

## Benefits

Reduce Theft of Assets & IP

Reduce Overall Cost of Response

Lower Disruption to Business

Mitigate Risk to Reputation/Integrity
